

Big Money in Big Pharma = Profit over people

The main principles governing the pharmaceutical “business with disease.” It is not in the financial interests of the pharmaceutical industry to prevent common diseases – the maintenance and expansion of diseases is a precondition for the financial growth of this industry.

Compared to the reality of the drug industry, my book reads like a vacation

John Le Carre, Author summarizes by the numbers

1. The pharmaceutical industry is an investment industry driven by the profits of its shareholders. Improving human health is not the driving force of this industry.
2. The pharmaceutical investment industry was artificially created and strategically developed over an entire century by the same investment groups that control the global petrochemical and chemical industries.
3. The huge profits of the pharmaceutical industry are based on the patenting of new drugs. These patents essentially allow drug manufacturers to arbitrarily define the profits for their products.
4. The marketplace for the pharmaceutical industry is the human body – but only for as long as the body hosts diseases. Thus, maintaining and

expanding diseases is a precondition for the growth of the pharmaceutical industry.

5. A key strategy to accomplish this goal is the development of drugs that merely mask symptoms while avoiding the curing or elimination of diseases. This explains why most prescription drugs marketed today have no proven efficacy and merely target symptoms.
6. To further expand their pharmaceutical market, the drug companies are continuously looking for new applications (indications) for the use of drugs they already market. For example, Bayer's pain pill Aspirin is now taken by 50 million healthy US citizens under the illusion it will prevent heart attacks

What Kills More Americans Every Year than World War II and the Vietnam War Combined?

American deaths from pharmaceutical drug side effects

106,000

per year

Prescription Drugs are the Fourth Leading Cause of Death in the USA

*Journal of the American Medical Association (JAMA)
April 15, 1998*

Americans killed in World War II

49,000

per year

Americans killed in Vietnam War

10,000

per year

7. Another key strategy to expand pharmaceutical markets is to cause new diseases with drugs. While merely masking symptoms short term, most of the prescription drugs taken by millions of patients today cause a multitude of new diseases as a result of their known long-term side effects. For example, all cholesterol-lowering drugs currently on the market are known to increase the risk of developing cancer – but only after the patient has been taking the drug for several years.
8. The known deadly side effects of prescription drugs are the fourth leading cause of death in the industrialized world, surpassed only by the number of deaths from heart attacks, cancer and strokes (Journal of the American Medical Association, April 15, 1998). This fact is no surprise either, because drug patents are primarily issued for new synthetic

molecules. All synthetic molecules need to be detoxified and eliminated from the body, a system that frequently fails and results in an epidemic of severe and deadly side effects.

9. While the promotion and expansion of diseases increase the market of the pharmaceutical investment industry – prevention and root cause treatment of diseases decrease long-term profitability; therefore, they are avoided or even obstructed by this industry.
10. Worst of all, the eradication of diseases is by its very nature incompatible with and diametrically opposed to the interests of the pharmaceutical investment industry. The eradication of diseases now considered as potential drug markets will destroy billions of investment dollars and eventually will eliminate this entire industry.
11. Vitamins and other effective natural health therapies that optimize cellular metabolism threaten the pharmaceutical “business with disease” because they target the cellular cause of today’s most common diseases – and these natural substances cannot be patented.
12. Throughout the more than one hundred year existence of the pharmaceutical industry, vitamins and other essential nutrients, with defined functions as cofactors in cellular metabolism, have been the fiercest competition and the greatest threat to the long-term success of the pharmaceutical investment business.
13. Vitamins and other effective natural health therapies that effectively prevent diseases are incompatible with the very nature of the pharmaceutical “business with disease.”
14. To protect the strategic development of its investment business against the threat from effective, natural and non-patentable therapies, the pharmaceutical industry has – over an entire century – used the most unscrupulous methods, such as:
 - Withholding life-saving health information from millions of people. It is simply unacceptable that today so few know that the human body cannot produce vitamin C and lysine, two key molecules for connective tissue stability and disease prevention.
 - Discrediting natural health therapies. The most common way is through global PR campaigns organized by the Pharma-Cartel that spread lies about the alleged side effects of natural substances – molecules that have been used by Nature for millennia.
 - Banning by law the dissemination of information about natural health therapies. To that end, the pharmaceutical industry has placed its lobbyists in key political positions in key markets and leading drug export nations.

15. The pharmaceutical “business with disease” is the largest deception and fraud business in human history. The product “health” promised by drug companies is not delivered to millions of patients. Instead, the “products” most often delivered are the opposite: new diseases and frequently, death.
16. The survival of the pharmaceutical industry is dependent on the elimination by any means of effective natural health therapies. These natural and non-patentable therapies have become the treatment of choice for millions of people despite the combined economic, political and media opposition of the world’s largest investment industry.
