

# Donald Trump picks Big Agro Agricultural Committee –Organic Food Supporters are NOT Happy

the Monsanto likes Trump, Trump has been mostly quiet in regards to his stance on GMOs. Trump picks Big Agro pro-Biotech for Agriculture Advisory Committee appointments.

Trump favors Big Agro in Approvals to Committee

According to [this article](#) from the website Food Revolution.org, Trump officially went on record as being in support of GMOs and biotechnology in a questionnaire from the Iowa Farm Bureau.

When asked, “Do you support the use of biotechnology in food products and oppose efforts to require mandatory labeling for foods simply because they contain ingredients derived from biotechnology?” Donald Trump reportedly answered: “Yes.”

Now, a series of recent appointments to the Agricultural Advisory Committee is adding even more concern to possible pro-GMO leanings (A complete list is available at the [Trump Campaign's website](#) and can be viewed by [clicking here](#).)

Notable appointments are:

Pat Roberts: The architect of the infamous, recently passed and [democracy destroying DARK Act](#) along with Michigan Senator Debbie Stabenow.

Charles Herbster: A Nebraska cattle-breeding company owner as well as the owner of another company that sells chemicals and fertilizers, Herbster is the pick of Trump to chair his Agricultural **Advisory Committee**. He's a [major funder and member](#) of the Ag America steering committee, joining Monsanto and DuPont among others. Trump has also included large-scale pork and beef producers, as detailed in the [Food Revolution article here](#). [Other notables](#) on the list of more than 60 include Rodney Davis, Congressman from Illinois; who is also the House Agriculture committee and Subcommittee Chair of Bio Tech.

The list also includes representatives from huge soybean, egg and corn producers as well, most of which utilize GMOs regularly in the creation of their products.

The full list is notably absent of organic or small farmer representation and is heavily tilted in favor of large agribusiness representatives.

And in the press release itself, the Trump administration's rhetoric sounded an awful lot like something out of a Monsanto PR rep's mouth:

"Mr. Trump understands the critical role our nation's agricultural community plays in feeding not only our country, but the world, and how important these Americans are to powering our nations economy," the release said. The "feeding the world" narrative is one that is routinely pushed by Monsanto and Biotech companies despite overwhelming evidence to the contrary (see [here](#) and [here](#)).

**MIT RESEARCHER'S NEW WARNING:  
At Today's Rate, Half of All U.S. Children  
Will Be Autistic (by 2025)**

**MONSANTO'S ROUNDUP USE vs CHILDREN WITH AUTISM**

First Synthetic chemicals made in 1869.

Use of SINthetically Derived Pesticides starts in 1900. Use Expands in 1909.

The first legislation providing federal authority for regulating pesticides was enacted in 1910.

**(ONE YEAR)**

Autism is first observed in 1900s and it is labeled Autism in 1911, near to the first use of the SINthetic Insecticides, just one year after the first use of the manmade chemicals.

At First Autism effects 1 in 10 million

Autism grows in perfect correlation to the use of SINthetic Chemicals World-Wide. The Causative relation of SINthetics causing Autism is absolutely confirmed

Today Autism effects 1 in 47
