Prof. DESIRÉ DUBOUNET

A Natural Medicine Doctor Trying to Make a Difference
Professor Desiré Dubouillet is indeed one of the most accomplished and versatile people I’ve had the pleasure of meeting; this is her story. Her accomplishments are of legend status, her expertise is expansive, and provocative manner is most interesting to say the least. It was truly an honor to interview such a talented and caring individual whom is trying to make a difference in natural medicine on this planet.

Who is Desiré Dubouillet?

An extremely controversial character deserves a chance to tell the truth of her background and experience. Desiré Dubouillet, born June 19th, 1951 in Warren, Ohio as William Nelson, has become the most prolific writer and defender of Natural Medicine. Her work as an International Lawyer, Professor of Medicine, Quantum Biologist, Award winning Movie Maker, TV Star, Actress, Singer, Pin-up Girl, Song Writer, Scientist and more is quite expansive. Desiré was trained in mathematics, quantum biology and statistics, plus was one of the few people with enough background, dedication and skill to value evidence in order to supervise research and validate natural medicine. Some of her earliest research is published in an internationally recognized and registered peer review medical journal. She worked on the Apollo project as an electrical engineer for AC Electronics in 1969. In addition, Desiré has worked with several scientists including Nobel Prize winners and nominees Hans Selye, Albert St Gyorgi, Roger Sperry, and William Fowler. Desiré has had a remarkable and yet controversial life of challenge and heroism.
“Her work and dedication to seek validation and verification has made enemies of the natural medicine charlatans falsely touting quantum education.”

One Person Can Make a Difference

“There was greed and corruption in traditional medicine, and there is fraud and deception in alternative medicine.” Desiré has been a controversial provocative champion for freedom of choice and truth in medicine her entire life. She has always valued humanity and struggled against the greed and psychopathology of major corporations. When she published the PROMORPHEOUS (a treatise on Quantum Biology) in the Library of Congress, she had established a proof that a synthetic anything is an insult to the body. Desiré originated the phrase, “Synthetic is SINthetic”.

In 1982 Quantum Scientist Desiré published the PROMORPHEOUS (a treatise on Quantum Biology used in this medical university course) she became one of the quantum pioneers in Quantum Healing. Her work and dedication to seek validation and verification has made enemies of the natural medicine charlatans falsely touting quantum education. Desiré was University trained in mathematics, quantum biology and statistics.

This helped her develop the original Quantum Computers the first Quantum software computer – the QXCI. She scientifically developed the science of VARHOPE, TVEP, GSRtDCs and others innovations to make the EPFX, QXCI, SCIO, and now the EDUCTOR. Desiré pioneered an electro-charging system of performance enhancement system as introduced in Charging the Body Electric. Clinical research has shown the GSRtDCs system to be able to enhance sport, school, memory, sport injury recovery, Alzheimer’s, and a host of other performance factors. Now Desiré is a Professor of Medicine teaching for the recognized IMUNE. Carl Jung made several Swiss Charters for International Teaching and Research Institutions. Desiré bought one of these charters from Carl Jung’s daughter Gret in 1995. IMUNE is recognized as a prestigious Medical University by the Romanian Ministry of Medicine. Desiré wants to develop IMUNE to be the best medical university in the world where the quality and quantity of medical information and training is the best.
A Voice for the People

It is evident as a leader in Natural Medicine, that Dr. Dubounet has made many enemies in the pharmaceutical industry. However, she has been a powerful voice attacking the other tyrannical large industries on this planet. She has always been a fighter to preserve freedom of choice and has worked extensively to vocalize the corruption not only in medicine, but with the oil, sugar and tobacco companies as well. “Rudolph Diesel made his diesel engine to operate on peanut or vegetable oil, which every farmer could grow on his farm to make fuel for his tractor and his car. This has been buried and I have fought to tell the story to save the world from CO2 gases.” For more information regarding the truth behind alternative oils, be sure to check out the article, Natural Canola Oil for Diesel,

“When the people of the world realize that synthetics are an insult to medicine, then change is inevitable.”

Besides her work to expose the corruption of the Oil industry, she has extensively worked to spread the risks of BIG Sugar on health and vitality. “As sugar spreads throughout the world, it leaves behind slavery, mental decay, disease, tooth decay, and death. Today sugar is the world’s largest cash crop and exposure of sugar disease capacities is difficult.” Desiré has also written comprehensively about the problem of evil tobacco. “The most dangerous thing you could do to a child is to get them addicted to cigarettes. This takes some 15 years away from life, robs almost $400,000 dollars out of the pocket during the child’s life, not to even mention the deterioration of health which is the greatest suffering. And yet no one has ever been prosecuted for reckless endangerment or willful neglect for participation in allowing a child to become addicted. And everywhere in the world on streets everywhere we see this number one crime of reckless endangerment against children.” Clearly, it is obvious that Desiré is a fearless and powerful leader dedicated to spreading truth on this planet.

Do you Foresee Change in Natural Medicine?

Professor of Medicine, Desiré Dubounet, is the most Published Naturopath in History. She has authored or edited over 100 medical journals, over 1000 medical articles, hundreds of other misc topic articles, and over 400 books and textbooks. To this question, Desiré responded that, “When the people of the world realize that synthetics are an insult to medicine, then change is inevitable.”

There is greed and corruption in traditional medicine, and there is fraud and deception in alternative medicine.” Of course vocalizing these beliefs would attract pessimistic attention. Rumors, innuendos and outright lies were made to distract attention from her work. Quackwatch has a negative reputation for attacking any natural medicine since they receive funding from the FDA and protect the “SINthetic” chemical companies. This results in small minded malicious attacks and misunderstandings. Desiré also mentioned that in order for there to be growth in natural medicine, there need to be more people like her which are dedicated to finding the truth. Also, that pharmaceutical companies need to sell both natural and synthetic options to make it possible for the general population.

Unfortunately Big Pharmaceutical Companies want to make sure that the appearance of synthetics are equal to, if not greater than, natural options. “There needs to be a freedom of choice but it seems like that Big Pharma are trying to eliminate their competition and force the use of synthetics”
**An Unforgiving Battle with the FDA**

Acupuncture is a 2,500 year old Chinese healing art, and in the United States it has been used for approximately 200 years. The status of acupuncture needles in the United States has always been somewhat tenuous. In 1973, the Food and Drug Administration classified acupuncture needles as "experimental" and "investigational." This meant that if someone wanted to use acupuncture needles, it could only be as part of a research study with written protocols; further, every person participating in a study involving acupuncture had to be advised in writing that acupuncture needles were experimental.

In 1976, the US lawmakers mandated an FDA registration for all medical devices manufactured or sold in America. Any Medical Device in the marketplace before 1976 was to be grand fathered into registration, unfortunately acupuncture needles were not allowed in. At that time, it was considered that acupuncture devices and accessories were investigational devices subject to the Investigational Device Exemptions (IDE) regulations. As such, these class III devices were permitted to be distributed only for the purpose of conducting clinical studies to establish their safety and effectiveness. In the absence of an approved premarket approval application (510k), the sale, promotion, and commercial distribution of these acupuncture devices and accessories were prohibited.

No manufacturer had prepared a proper 510k application in accordance with the 1976 act to allow acupuncture needles to be moved from an experimental stage and put into its proper place in the medical device category. Experienced with the FDA authorization process, after already having registered a medical device to measure and help correct the body electric in 1989, Professor Desiré Dubouet petitioned to validate acupuncture in 1993 with the American Chinese Medicine Health Center. Desiré was wrongfully and maliciously attacked for this. “Due to Acupuncture being a drugless therapy, it is frowned upon by pharmaceutical companies and their undisguised junk yard watch dog, the FDA, who transparently protect the Drug companies.” Professor Dubouet uncovered some laws the FDA were violating in not registering the needle as medical equipment.

“Many in the FDA do not like any drugless therapy and to stop the acupuncture needle application they sent out the heavy handed cowboy agent to investigate and try to make some kind of a felon case against me.”

In the early 1990’s, following the 510k approval of the body electric device, other competitors were designing similar equipment with false claims. “The FDA was not enforcing the law on the sham devices using the point probes and the FDA was not notifying the doctors of what the law was.” The questionnaire she had received from the FDA following the 1989 acceptance was given to her secretary to send to other doctors. “My secretary was inept and instead of using the correct letterhead, copied the original document with FDA’s seal and sent it to the other doctors practicing biofeedback.” The FDA agent found this letter and advanced an investigation (stopping the acupuncture needle application).

The FDA agents in 1995 trumped up charges against Desire to stop her 510k from registering Acupuncture needles as medical devices. “In 1995 I was indicted for mail fraud and was arrested. In 1996, Federal Judge Matsch (the famous Oklahoma City bombing judge) dismissed the case saying he saw no crime I committed and made the FDA drop their case.” Two weeks later the restrictions were lifted on her 510k, and acupuncture needles were classified as medical devices for general use by trained professionals in the USA. “The FDA extremists were defeated, but the FDA still harbors a grudge for me.”
Why are you not in America?

Since 1996, Professor Dubounet has not returned to the United States. “The FDA still has a vendetta against me. Following my cleared case in 1996, I was charged again with the same crime that I already faced jeopardy from which was deemed invalid by Judge Matsch.” At this point in time, Professor Dubounet had already returned to her home and family in Budapest, Hungary where she continued her work in biofeedback and taught homeopathic medicine at Semmelweis Medical University. “When I last left America to return to my family here in Hungary there were no charges against me. I did not flee from charges and I am not hiding. The American Embassy has known full well of my address.”

Desiré is an important celebrity in Hungary and has made over 50 movies, plus she has appeared on over a hundred Hungarian TV shows.

Being born both sexes, Desiré legally changed her name and gender rating from William Nelson to Desiré Dubounet first in 2002 in England. Then she legally changed her name in America with her American federal voter’s registration, her Ohio medical records and her Mexican travel Visa. The list of her name change validation is vast, but in 2009 the US embassy took Desiré’s passport to push her back to face torture. In 2010 America joined other countries in allowing a person to change gender on their passport. Desiré applied to the embassy for a one way passport with her new legal name and gender to return to America to clear up the bogus charges. However, the US Embassy in Budapest has wrongfully not allowed him to change both name and gender like they are legally supposed to. President Obama was elected on the ticket that “Gay Rights are Human Rights.” Obama said that the embassies would open their doors to Gays and Transsexuals, but clearly the Hungarian Embassy did not read this memo. Potentially this could be a conspiracy to deprive Desiré of her rights may be in the wind.

“I did not flee and I do not hide, thus I am not a fugitive.” She has been in contact with prosecutors several times over the years renegotiating to end this but no guarantee of any degrading treatment. “The case against me has no merit. I want to return and clear it up, but I was told by my ex-federal prosecutor lawyer that there was a vengeful degrading humiliating treatment awaiting me. The prosecutor wants me to have no bail stating that I am a fugitive and a flight risk. I am not a fugitive, nor am I a flight risk. I am buying my own ticket to return and will come to America on a temporary passport, but I will not be able to leave. I am so confident in my case, there is no reason to even think to flee. I would welcome any opportunity to discuss true science with anyone in the FDA or any agency. I have no criminal record and it is both insulting and farcical to recommend no bail for a simple mail fraud case. I am not public enemy number one. This is an abuse of discretion and just another way for the FDA to mess with me needlessly. It is degrading and the FDA wants to humiliate me out of some sort of twisted retaliation. For someone with no record, no escape, no chance to flee, a case once dropped by a federal judge, someone with a family and a good life and job in Europe, it is illogical and insulting to recommend no bail. There are still some sanctimonious people in the FDA with covert motives and covert charges trying desperately to hurt me.”

"The definition of a fugitive is one who flees a jurisdiction to avoid charges or hides to avoid charges. I did not flee and I do not hide, thus I am not a fugitive."
Denying bail on a low level mail fraud case with no damages whatsoever, plus being a case that has already been dropped by an eminent federal judge, is unheard of. The international law of refoulement clearly specifies that a person cannot be forced to return to a country where potential harm and or degradation possibly await them. Denial of bail in this case certainly should constitute as such degradation, and the International refugee law prohibits this. Pretrial detention of suspects directly impacts the presumption of innocence. The cornerstone of the justice system is that no one will be punished without the benefit of due process. Incarceration before trial, when the outcome of the case is yet to be determined, cuts against this principle. The Founders were aware of the dangers inherent in indiscriminate imprisonment, which is one of the main reasons behind the inclusion of the Eighth Amendment in the Bill of Rights, prohibiting excessive bail. There was no charge against Desiré when she left American jurisdiction, and she is not hiding in the jurisdiction, so Desiré is not a fugitive. Her prudence to avoid degradation, excessive and vindictive prosecution is wise, not unlawful.

**Are you Concerned?**

There are indeed groups of Ultra-Rich who seek power of the minds and finances of the world’s people. Desiré has been dedicated to finding ways to deal with such threats. Her lifetime dedication as a risk to the big sugar, tobacco, oil, and pharmaceutical companies’ wealth and vitality has certainly made her unfavorable to many. She has overcome many obstacles, and is now the most famous natural medicine doctor in the world. “Being a pioneer fighting for natural medicine has surely made Big Pharma unhappy.” My concern was expressed with the large quantity of homeopathic and natural medicine leaders in the US being murdered. She stated that, “this is expected when there is a trillion dollar industry on the line. The FDA is ultra rich and they are trying to preserve their industry by eliminating competition.” Desiré Dubounet has had a profound effect on the world and she continues to fight for freedom. She has been wrongfully and maliciously attacked and slandered, perhaps her struggle will be successful someday. The fight against greed and secret societies has a Champion in Desiré Dubounet.

"She has overcome many obstacles, and is now the most famous natural medicine doctor in the world. “Being a pioneer fighting for natural medicine has surely made Big Pharma unhappy."
