World Health Products
Rating Service

The challenge in today’s market is to substantiate and validate the claims a company uses in the market. Alternative medicine has long harbored people with vague unverified and often completely fraudulent claims. Some people feel that all of alternative medicine is fraudulent. It must be pointed out that most of alternative medicine is not properly validated. It is the job of alternative medicine people to band together and develop criteria for validation and a system to rate the claims made by a company and publically present this rating in a fashion to be used to defend these claims in the market place. To this end the Alternative Medicine Professional Rating System (AMPRS) has been developed. Here is a basic simple outline for the rating system.

Scientific theory Review

A scientific review is needed to have an independent scientist appraise the scientific theories behind a device. As an example that fits into the needs of today we must point out that medication testing using muscle testing has no real scientific validity. There is a way to measure the magnetic field of an item inside a glass or plastic bottle such as an airport metal detector. But if you put an apple, orange, tomato, or DDT poison inside the bottle there is no known scientific way to accurately measure the reaction of a patient to such non-magnetic substances.

A shark has a powerful electro-chemical detection system in his nose to detect things at a large distance such as blood. But if the blood is sealed in a glass container the shark cannot detect it. One drop of blood into the electro-conductive salt water and the shark can react. There is a well-established and highly published science of conductive electrode reactivity called voltammetry that uses electrodes to measure the electro field of an item. This field amplified and given to a patient and his reaction measured. Double blind testing has determined the accuracy of this process. This is science, but muscle testing through bottles has been shown to not be accurate at all. It is controlled by the whim of the therapist. Divination unscientific techniques abound in alternative medicine.

A basic scientific review will cost just 1000 euro. Here a qualified scientist will provide a certified document of his analysis and suggestions for future scientific substantiation. This is a start for validation and it must be pointed out that this is not complete validation or substantiation.
Testimonials

Most alternative therapists are math phobic and hate numbers thus statistics. They like stories. But sometimes these stories are embellished and twisted out of context. Professional athlete promotions are also popular but none of these are proper validation or substantiation. We can review this as well.

CE registration and other compliance with governmental authorities

Here a review of the compliance regulations will be accessed in light of validation of claims. If you register as a biofeedback system, it does not let you evaluate parts of the liver. Your claims must now fit the medical registration of you device. Compliance registration is of three parts.

1. Company quality control and traceability,
2. Safety, and
3. Medical use for claims. We must assay that your claims fit into your registration. Many people bend their registration into crazy claims which can hurt them in the market.

Many companies have owner operator claims, salesman claims, multi-level networkers, teacher’s declarations, and providers of information and they use a wide variety of ways to make claims. Some are done correctly some are not. These need to be reviewed to help companies to avoid trouble.

For 1000 euros a professional review of marketing claims and compliant registration can be done.

Research

There is a host of different types of research all with varying effects on substantiation.

1. Scientific bench testing research with no patient. Quality, function, electrical performance and above all safety tests must be done.
2. Clinical research must adhere to the form of the original Helsinki accord to protect patients. Patient must be protected, afforded informed consent of voluntary participation, told of risks and benefits, protected with confidentiality, given feedback of results, and informed of the nature of the test.
3. Double blind tests should have proper random sampling, placebo control, and participants told they may or may not be in the control group.
4. Medical supervision and professional record keeping is a needed for proper validity.
5. 40 patients is the base number to start to offer significance to results for publication. But case studies, small groups and other studies can be valuable as well.
6. An approved ethics committee, and Investigational Device Exemption (IDE) and or a certified Institutional Review Board (IRB) to oversee the study are required.

Professional medical supervised studies can be done for a fee. The AMPRS can organize a professional study of 40 patients into randomized groups for testing for these fees.
Ethics committees can charge 2,000 euro to 5,000 for registration.

IDE plan and set up can cost 5,000 euro

Medical doctor supervision- 10,000 euro

Advertising for Subjects and random sampling - 1,000 euro

Placebo officer- 1,000 euro

Site selection and approval- 1,000 euro

Study performance- 10,000 euro

Statistical review of data- 1,000 euro

Study write up with proper references and procedure- 10,000 euro

So a base study of significance could cost as little as 40,000 + euros to be legally and completely arranged, performed to completion and written up into publication form. Special concerns or additional procedure can affect the price.

Publication

We work with an International Peer Review Medical Journal which has had it international library ISSN number since 1996. It has been unchallenged and reputable for over 15 years. The International Journal of the Medical Science of Homeopathy, Naturopathy, and Energetic Medicine is a peer reviewed medical journal which has published hundreds of article for the world library system. http://ijmshnem.com

This journal charges 1,000 euros for review of a publication article. This journal is very friendly to all of natural medicine so the chances of publication are very high. Other journals will be more and more friendly as time goes by but now we have at least one friendly such publication.

The credentials of your scientists, medical doctors, therapists, lecturers and more can all be reviewed to see if your claims are made by people who are what they claim to be.

Accredited Medical University Instruction

We work currently with two European accredited medical universities, the Medical and Pharmacological University of Timisoara and Iasi. The medical faculty is always interested in teaching natural medicine techniques that are properly validated and substantiated. Members of the faculty are available for consultation or to be providers of information for proper fees. It usually takes peer review publication over seven years to get into a university. But good techniques and products can get there sooner.

A doctor or therapist can be hired as a provider of information. A provider of information needs to have a contract that does not pay percentage but pays a simple honorarium plus expenses for lecturing. The contract specifies that the provider does not own any percent of the company and he does not get a
percent of sales. The provider uses his freedom of speech rights to express his opinions. The provider
does not hand out promotional material or sales claims from the company. The company does not
actively have promo material inside the place of the lecture or during the lecture. It must be understood
that the provider is not a salesman but he is free to express his experiences and his opinions. The
provider cannot quote or reference studies or experiences that do not exist. Any reference to any such
study must be able to make such study available in 48 hours or the provider might be sued for
deception.

Your device or product research might be added to a certified medical university textbook with a proper
ISBN international Library number. You might consider purchasing advertisement in one or more of the
journals. If properly disclaimed and reviewed you might get an advert approved. It is currently 1.500
euro for a full page. Your study might be quoted or published as well.

Governmental Professional Work Qualification

We presently work with a European government that credentials a work certificate in energetic bio-
resonance medicine. The Maastricht treaty stated that in Europe what is legal anywhere is legal
everywhere. This does not hold true for the workers yet as that complete harmonization is still
developing. But it does hold true for product sales and product claims. The 2010 European constitution
now makes Europe a single entity. No longer does one have to register in all countries a product for sale.
And when one government offers a work qualification the other countries are honor bound to not
dismiss it but must consider it carefully. As for product claims it further adds to validation and
substantiation.

Summary

So as we see it is possible for alternative and energetic medicine to get full validation, verification and
substantiation. It is not easy. It is not free. The tremendous amount of fraud and deception in all
business has made this needed. The future of this industry depends on us all supporting the success
stories and finding our way thru this quagmire to allow our industry to flourish.

We ask a fee of 450 euro a year to join as a member and get publications and updates. If you pay 1950
euro you get a year’s membership and a full appraisal of your claims that will result in a rating of your
operation in all of the above categories and suggestions for future validation.

We welcome you to come to our meetings and see that it is possible and probable for your company to
flourish and validate your claims and d expansive business in the world market. If we band together and
stop the lies and slander of the successful ones we can save our industry and increase our market.

We need to put our money where our mouth is and prove our claims in professional scientific ways. As
you can see for as little as 50,000 to 100,000 euros your product could be proven valid and your claims
substantiated. Why wait, why give in to the petty attacks, let’s move forward together.
Here is a professional rating system for Alternative medicine Products or Devices to use to Verify, Validate and prove their claims to the world and in the market.

11 European Governmental Professional Work Qualifications for using the device. The SCIO is an example of a device that has met each and every criterion on this list to get a Platinum rating.

When the Romanian government made the Neuro-Anatomy, Neuro-Electro-Physiological, Biofeedback and Bio-resonance SCIO therapist an official work qualification license it fully legitimized energetic alternative medicine. The Maastricht treaty of Europe said that what is legal anywhere in Europe is legal everywhere in Europe. In 2010 all of the countries of Europe signed the Europe constitution and thus united Europe in law and spirit. Many small minds do not like big things and small petty minds fight against such growth. Harmonization of Europe Law is happening gradually but it is illegal to look down your nose at Romania. And Romania has defended energetic alternative medicine for the world.

10 Taught in accredited medical universities and your device/product appears or your peer reviewed medical studies are quoted in certified medical textbooks. This takes a minimum of seven years in peer reviewed medical journals. Gold rating.

The SCIO is taught in three major fully accredited Medical Universities with full validation. The science of the SCIO has been fully developed tested and Clinically. Legally, and Scientifically validated.

9 Medically supervised, independently researched, double blinds, Peer reviewed medical journal publication that validates to significance the function of your device/product. 40 patients needed to start significance and a thousand plus for full verification. Silver Rating.

8 Double Blind Independent Medically Supervised Studies. Proper Ethics Committees and or Institutional Review Boards are needed, as well as informed consent and full compliance with the Helsinki research accord. Bronze rating.

The above ratings indicate a true validation process to verify the claims made for the device.

7 Independent Medically Supervised Studies. Proper Ethics Committees and or Institutional Review Boards are needed, as well as informed consent and full compliance with the Helsinki research accord.
6 TESTIMONIALS, STORIES OR clinical studies done by your personal staff. Proper Ethics Committees and or Institutional Review Boards are needed, as well as informed consent and full compliance with the Helsinki research accord.

The above criteria relates to the full validation of clinical testing, publication, and medical education.

All devices above will have the SCIENCE + DEVICE STUDIES+ CE - United Laboratories or equivalent SAFETY Registration+ CE or FDA MEDICAL CLAIM Registration. All of the ratings above are an indication of how just well it is tested for medical use. Number 11 is the pinnacle or highest level of validation.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>SCIENCE + DEVICE STUDIES+ SAFETY Registration+ MEDICAL CLAIM Registration</td>
<td>Your device/product is proven safe, and effective for medical uses in the claims you specify in your registration. This is the minimum qualification to market your device, but in today’s world we need more.</td>
</tr>
<tr>
<td>4</td>
<td>SCIENCE + DEVICE STUDIES+ SAFETY Registration</td>
<td>Your device is safety tested to CE standards to prove your device/product is safe to market.</td>
</tr>
<tr>
<td>3</td>
<td>SCIENCE + DEVICE STUDIES</td>
<td>Your device/product is bench tested for performance specs and compared to other devices legally sold in the market.</td>
</tr>
<tr>
<td>2</td>
<td>SCIENTIFIC THEORY</td>
<td>True excepted science is used to explain how the device/product works but there is no real validation, verification or proof that it works.</td>
</tr>
<tr>
<td>1</td>
<td>MAGICAL THINKING SCIENCE</td>
<td>Pseudo-science, unproven theories, or futuristic notions that might be proven correct in the future are used to market a device/product. Schuman wave generators, diodes for radiation diversion are examples. There is speculative theory but little true evidence to support it.</td>
</tr>
<tr>
<td>0</td>
<td>DIVINATION</td>
<td>The devices uses subtle muscle control of the therapist to appear that is measuring the patient’s reactions, when in fact the therapist controls all results. Muscle testing, point probes, rub plates, pendulums, swing sticks are all examples of divination devices. These devices fail true double blind tests because the therapist needs to know what he is testing to get results.</td>
</tr>
<tr>
<td>-1</td>
<td>FRAUDULENT</td>
<td>The device makes claims that it does things it does not do; Such as a biofeedback device that claims to measure bio-function but does not. Any system that uses lies to market, or lies about registration is fraudulent. The LIFE system, Introspect, Physiospect, Sensitive Imago, Delta, Gernot Gauper fraudulent counterfeit of the SCIO, Francisco Martinez Fraudulent Software are examples.</td>

This is to inform you that the Homeo Diagnostica Academy Press has published

The International Journal of the Medical Science of Homeopathy

as a peer reviewed medical journal

under Hungarian ISSN National Center 1997 apr15-1 and has awarded the international identification number:

ISSN 1417-0876

This number will remain unchanged for the lifetime of this publication.

You are kindly reminded that with every future publication the ISSN number will be printed on each book. Should you wish to have this publication printed internationally the identification number can be found near by the Hungarian code which would be:

HU ISSN 1417-0876

If it is your preference to have a detailed explanation of this publication available you may visit the Hungarian ISSN National Center web pages where you will find the OSZK web page called "Local services" and in this menu point you would enter your identification number. The web address can be found at:

http://www.oszk.hu/index_hu.htm

In relation to this document or in any other point please contact us at your convenience.

Thank you for your recent enquiry. We have assigned the following ISSN:

The international journal of the medical science of homeopathy (Online)
ISSN 2041-4293

We would be grateful if the ISSN could be printed in all issues of the serial, preferably on the top right-hand corner of the front cover or title screen in the form given above, i.e. preceded by the letters ISSN with a hyphen separating the two halves of the number. If the serial is available in more than one physical format, a separate number is assigned to each version and all the ISSN should be quoted on each version available, with an appropriate qualifier in brackets, e.g:

ISSN 0000-0000 (Print)
ISSN 0000-0000 (Online)
ISSN 0000-0000 (CD-ROM)

The same ISSN is printed on successive issues of the serial, providing the title does not change. Please notify us in advance of any change in title, however slight, as this may necessitate the assigning of a new number. The ISSN should also be quoted in all promotional and descriptive material concerning the serial.

Information concerning the voluntary schemes for the deposit of e-journals and offline digital publications with the British Library is available at: http://www.bl.uk/aboutus/stratpolprog/legaldep/index.html#elec. Further enquiries concerning the deposit of electronic publications can be made by e-mail to LDO-Electronic@bl.uk

Thank you for your interest and co-operation.

Yours sincerely

Abstract:

A critical and momentous research project was developed for the last 50 years. This SCIO device is a Medical-Psychologic device used for stress reduction and patient treatment. Over 2,200 qualified biofeedback therapists joined the Ethics Committee study to evaluate how stress reduction using the SCIO device could help a wide variety of diseases.

The device and the study have no side effects. This was a staff of medical doctors, who did not participate in the study.

Over 90,000 patients gave informed consent and participated in the study. The study would establish that the SCIO device was effective for a variety of conditions. A total record of the results and the names of patients were recorded to confidentiality.

Two of the 2,200 plus therapists were given blank devices that were functionally the same but were non-functional. These two therapists were given 35 patients each. This was to determine the double-blind component of the placebo effect as compared to the device. Thus the study groups were placebo group, a sub-placebo group, and an attached harness group.

This study verifies the safety and efficacy of the device. There were small effects seen in the placebo group, larger effects in the sub-placebo, and smaller effects in the attached harness group.

In this study, 60 patients were evaluated for their daily estrogen cycle. The results have shown that the SCIO estrogen streaming therapy of 50 day for 3 days was their estrogen...

Data was collected and the study supervised by The Ethics International Institutional Review Board of Romania. The analysis and study presentation is done by the Centro Ricerche, University of Venice + Padova, Italy.

(Ttis oticle is translated into English and Hungarian from the original Romanian)

Abstract

This study demonstrates the safety and effective qualities of the SCIO device in a large scale study. A large scale study of over 500 patients with over 300,000 patient visits reported their diseases. The SCIO measures global electric measures of the body. When there are abnormal measures of the electrophysiological factors, the device allows a feedback loop between the Central Nervous System (CNS) of the patient and the device. Of the patient visits, some 50 plus% showed very low electro-physiological factors below 30% normal. The cybernetic electrophysiological feedback loop was then used to help the patient reduce stress and thus improve the electro-physiological factors. There was improvement in 95% of the electro-physiological measures at the end of the session (post test) vs. the pre test. The average improvement in the electro-physiological VARHOPE factOns is 5%. These patients reported stress reduction and improved wellbeing as well.
ABSTRACT: We are made up of atoms that are mostly electrons and protons. The outer electrons of any atom or molecule never touch. The outer electrons of any atom or molecule never touch another set of electrons. The entire interaction is through electro-magnetic-static, quantic, or other interactive fields.

There is electrical energy in the human body. The simplest factors of anything electrical are the volts, amps, and resistance. This makes up Ohms law of electronics, where Volts = Amps times Resistance. This is a correlation, not an exact law. Oscillations of the Volts and amps give us the frequency of a current. Fluctuations of these calculations can be used in virtual or mathematical ways to calculate other biological factors. There are norms of the body electric variables relative to age and lifestyle.

Thus the key bio-electric factors of your Amps, Resistance, Hydration, Oxidation and Protons versus Electron charge stability are measurable with the SCIO. Then using a cybernetic biofeedback loop can help to stabilize the VARHOPE of a client.

In this study, we assay the VARHOPE scores of several clients. In all cases there is a significant improvement in the bio-electric after a simple SCIO therapist lead session. This study shows three cases and an overview of one hundred cases.

Abstract
In this short article we review some basic foundations of enhanced learning or as Sheila Watson once described it superlearning. We will discuss the theory and the use of the QXCI biofeedback system in superlearning context. A short study on the effectiveness of Sheila Watson superlearning system is challenged by having 19 students try to learn some foreign vocabulary words with or without the system. The relaxation had considerable positive effects. The students could learn twice as much in half the time.

Key Words: Superlearning, memory enhancement, frequency, ozonov

PURPOSE OF STUDY

The purpose of this clinical study is to determine the efficacy of the ECLOSION ElectroPhysiological Feedback Xroid (EPFX)/Scientific Consciousness Interface Operations System (SUO) device, manufactured by ECLOSION Kft (the Company), in stress reduction by introducing low-level electromagnetic frequencies into an individual's body through electrodes attached to the person's wrists, ankles, and forehead to balance or harmonize and return to normal the optimal frequencies at which the body's cells and organs should resonate. This enables the body to strengthen, heal and expel the pathogens that propagate stress; and its associated 'unwellness', consequently reducing stress and improving general health and function.
A double-blind placebo-controlled study of the application of the SC/0 Universal Electrophysiological Biofeedback System for statistical evaluation of the SCIO’s ability to increase Body Wellness after one 45-minute session

Dr. Codruta Baceanu and Dr. Onut Baceanu in Timisoara, Romania;
Dr. Rainer Mutshler and Kathrin Sollner in Speyer, Germany. Dr.
Danis in Budapest, Hungary

In this study there were oodusive results of electro-physiological improvement. This study was conducted at five sites of approximately 40”Subjects in each.
Under medical supervision the study was conducted in Budapest, Hungary, Timisoara, Romania, Seattle Washington, Speyer Germany; and Paris, France. Thus there were over 200 patients in this medical study.

S August 2009 27 November 2009.

Introduction

BACKGROUND: Stress is known to have many negative effects on multiple aspects of an individual’s life. Stress can affect an individual’s physical, cognitive, emotional and social well-being. We hypothesized that within one 45-minute biofeedback session, a measurable improvement in Body Wellness indicators can be achieved.

QUESTION: To evaluate whether a 4-minute session with SC/0 biofeedback can improve an individual’s Body Wellness.

DESIGN: Randomized, double-blind, placebo controlled trial.

SETTING AND PATIENTS: 192 individuals with awareness of levels of perceived stress as well as injuries/pain, between 1 and 65 years of age, male or female, randomized into placebo and SCIO test groups, at private clinics at multi centered sites.

INTERVENTION: Subjects were randomized to the test group (a 45 minute SCIO biofeedback system session) or placebo (SCIO, Maitreya Kft. www.maitreyakft.com)

MEASURES: Pre and post measures as follows: Quality of Life Questionnaire, Energy Index Factor (systolic blood pressure left arm sitting + pulse), Grip Strength Test (measured in kilograms), Oxygenation Test, Flexibility Test (measured in inches in the USA and centimeters everywhere else), Memory Test, pH Test, VARHOPE scores (electrical measures within the device, as follows: voltage (V), amperage (A), resistance (R), hydration (H), oxygenation (O), pmtone pressure (P) and electron pressure (E)).

RESULTS: Patients in the 5010 group had greater VARHOPE scores than those in the placebo group (p<0.005). The other measures of Body Wellness were not statistically significant, but there are trends in the improvement levels between the Test and Control (Placebo) groups.

CONCLUSIONS: The electrical parameters of VARHOPE can be improved by a 45 minute SCIO biofeedback session. However, it may require more SCIO biofeedback sessions for the other Body...

Voltammetry Stimulation of Testosterone in Gold medal Athletes in the China Olympics

Talken from Adam Mandef's lecture in 2011 Budapest at the congress on Sao about work done at the 2008 Olympics

Adam Mandel was sent to China to work on the Chinese Athletes with the SCIO in 2007 till 2008. He presented his work for the first time in the 2011 International conference on the SCIO held in Budapest. He led "The Greatest Story Never Told" he showed the audience incredible awe inspiring details of wondrous results with the SCIO. This is a brief summary of his 3 part lecture now available from IMUNE.

Adam talked about testosterone boosting by voltammetry streaming therapy of the SCIO. The SCIO is a
Cranial electrotherapy stimulation and fibromyalgia

Marshall F Guilja

Cranial electrotherapy stimulation (CES) is a well-documented non-invasive modality that has been proven effective in many studies of fibromyalgia (FM) patients. CES is a painless and non-invasive modality that can be combined with FM and how they relate to the individual's condition. FM frequently has many comorbidities, such as anxiety, depression, irritable bowel syndrome, and others. However, despite these comorbidities and overlapping criteria, the American College of Rheumatology for FM (some physical and mental illness) believe that there is probably no single homogeneous condition that can be labeled as FM. Whether it is a disease, a syndrome, or something else, it can feel like they are TW; there is no one diagnostic tool that can measure the disease, results of various treatments and their effectiveness in improving the condition. Biofeedback, a powerful reduction technique, is an assessment of the physical and psychological symptoms that can improve the FM patient's quality of life.

Fibromyalgia medicine may also include CES as a significant part of the therapeutic regime. FM medicine includes physical therapy for FM, which may prove to be effective in improving the condition. CES is a well-documented clinical modality that can enhance the patient's sense of being in control of their condition. Biofeedback, a powerful reduction technique, is an assessment of the physical and psychological symptoms that can improve the FM patient's quality of life.

Cranial electrotherapy stimulation (CES) is a well-documented non-invasive modality that has been proven effective in many studies of fibromyalgia (FM) patients. CES is painless and non-invasive, and it can be combined with FM and other conditions. However, despite these comorbidities and overlapping criteria, the American College of Rheumatology for FM (some physical and mental illness) believe that there is probably no single homogeneous condition that can be labeled as FM. Biofeedback, a powerful reduction technique, is an assessment of the physical and psychological symptoms that can improve the FM patient's quality of life.

Fibromyalgia medicine may also include CES as a significant part of the therapeutic regime. FM medicine includes physical therapy for FM, which may prove to be effective in improving the condition. CES is a well-documented clinical modality that can enhance the patient's sense of being in control of their condition. Biofeedback, a powerful reduction technique, is an assessment of the physical and psychological symptoms that can improve the FM patient's quality of life.
TVEP reactivity scores to isode compounds measured

Abstract: In this study we tested 21 males Transcutaneous Voltammetric Evoked Potential (TVEP) electrical reactivity to two compounds given internally. One was diluted orange juice to act as a placebo and the next one was a safe weak dilution of a common insecticide. The subjects had a very significant reaction to homeopathic isode compounds containing the insecticide for tox and other detox compounds. They also had a no measurable reaction to placebo orange juice after testing. The placebo test showed no reaction to the sensitive compounds were as the treatment group had significant reactions. This points to the efficacy of the TVEP method.

TVEP reactivity scores to Nosode compounds measured

Abstract: In this study we tested 5 males and 5 females with known infections using the Transcutaneous Voltammetric Evoked Potential (TVEP) electrical reactivity in the SCIO. The SCIO readings to the infectious nosodes of the known infections of the subjects was compared to TVEP xroej scores of the infectious items trivector readings. The reactivity scores of the known nosodes were significantly higher than the non-infectious items. This proves the TVEP reactivity reaction of the SCIO.

Abstract: As we have shown everything is an energetic reflection of fields that hold atoms in their places. These fields make us up are reactive with the environment. We must decide what is appropriate to eat and what to avoid. This education starts at the earliest of ages. Most of our current electro detection of what is good or bad for us takes place in the nasal-pharynx between smell and taste. The shape receptors on the smell and taste buds are electronic. They sense appropriate voltammetric fields that says it is good for nutrition or what is bad. The taste receptors do not absorb or metabolize the nutrient they only credential it for intake by measuring the shape of the fields with the shape receptors of the tongue. Voltammetry is the science of analysis of the electrical fields of a substance.

We have shown the patent for the process of the QQC voltammetric analyzer. This device has been designed to work like the human tongue and recognize the voltammetric signatures of items. These signatures are maintained as a 22x22x22 matrix of 10,641 separate shape vectors that constitute one signature. Since these fields reflected shapes they have a 3 Dimensional component and are referred to as the QQC voltammetric signatures. These complex signatures can be amplified and inputted into the body as part of the Xrrol analysis in the EPF or what is now known as the SCIO.

The Xrrol analysis is where the SCIO device rea.ures the reactin of the body to over 10,000 substances at the calibrated speed of the body reaction. During the calibration of the SCIO device to the subject the device will measure the voltammetric field of the patient and then send in the QQC. Then the voltammetric signature of what is generally known as the weakest reactive substance (distilled water) is sent in over 20 times and the highest known reactive substance combinations is sent in 4 times. The starting speed is 103° of a second. If the subject does not react significantly to the reactive substance versus the non-reactive distilled water the speed is reset minus one to 102° of a second. The speed drops in this increment till the subject has a significant reaction to the reactive substances and it is repeatable. This then gives us a measure of the speed the subject reacts to items. Research in the 1980s showed that patients on morphine reacted much slower to normal patients. Then a variety of reactive speeds were shown thus making a speed of reactivity calibration needed for proper testing.

There are several factors that can interfere with the testing of reactivity. If we test and test an item over and over there is adaptation. An aberrant movement electrical waveform, or a brain wave surge can affect a reading. So we have seen that the reading of reactivity for a single item is not as significant as we would like. We could put a subject into a Faraday cage and perfect control mental aberrations it is not likely. But we have seen that if we measure family reactions we can get some good insight into the reactivity fields of a subject. Research has shown that these families that we use to develop profiles are worth medical attention. In this review over one hundred thousand subject studies have verified the TVEP reactive families and the risk profiles have resulted from this work.

In this study over two hundred subjects were measured for Xrrol analysis on either the normal setting or a placebo setting. This was done to validate the TVP validity and show that on normal setting there would be much more replication of data.

Proper Ethics committee and IRB were used and informed consent from subjects. The study took place in Europe and in America. Subjects were asked to do several measures of their wellness and they were measured for their Xrrol reactive profiles before and after the test. Repeated items were counted in placebo versus real testing.
TVEP reactivity scores to Allersode compounds measured

Abstract: In this study, we tested 9 males and 7 females with known allergies using the Transcutaneous Voltammetric Evoked Potentials (TVEP) electrical reactivity in the SCIO. The SCIO readings to the allergens of the known allergies of the subjects were compared to TVEP readings of the non-allergic trivector readings. The reactivity scores of the known allergies were significantly higher than the non-allergic items. This proves the TVEP reactivity reaction of the SCIO.

Bioenergetische Diagnose und Therapie mit umweltmedizinischem Potenzial

Anwendungsmöglichkeiten des computergestützten Bioresonanzsystems SCIO

Seit zwei Jahren macht auch in Deutschland ein bioenergetische Hightech-System (SCIO) mehr und mehr von sich reden. Seine Attraktivität liegt in der Möglichkeit begrundet, nicht nur energetischen Störungen des Patienten zu diagnostizieren, sondern mit hingehältnisweise den meisten energetischen Therapien durchzuführen zu können. Dieser Beitrag befasst sich mit der Fragestellung, welche Optionen dieses System bietet, funktionelle Störungen, die durch Schadstoffe der Umwelt hervorgerufen werden, zu analysieren und zu behandeln. Zumindestes Verständnis wird zunächst in die Funktionsprinzipien dieses bioenergetischen Verfahrens eingeführt.

SCIO ist ein hochkomplexes biöenergetisches Verfahren, das ein Scanner energetischer Störungen des Patienten auf mehrere Kilometer Entfernung ausführen kann. Aufgrund dieses Prinzips der energetischen Medizin, die derartiges Verfahren bietet, werden es von Therapeuten weitesten Spektrogramm der Organsysteme aufzeichnen und diagnostizieren könne. Dieser Beitrag befasst sich mit der Fragestellung, welche Optionen dieses System bietet, funktionelle Störungen, die durch Schadstoffe der Umwelt hervorgerufen werden, zu analysieren und zu behandeln. Zumindestes Verständnis wird zunächst in die Funktionsprinzipien dieses bioenergetischen Verfahrens eingeführt.

**Resonanz-Test**

In der Elektroakupunktur wird die bioenergetische Information einer Substanz auf die ein- und andere Leiden auswirken können.

Mit Hilfe dieser Technik wurden Frequenzmuster in einem Energielevel von rund 10.000 homöopathisch aufbereiteter Substanzen inkluise Nosoden, Ättermoden, Isoden, Sarkoden, Organpräparaten, klassischen und kombinierten homöopathisch digital erfasst. Unter diesen berücksichtigen die sogenannten „isoden“. Dieses sind industriell hergestellte Substanzen, z. B. Formaldehyd, Insektizide, Pestizide und PCB, die homöopathisch aufbereitet wurden. Durch die große Vielfalt der digital erfassten Frequenzmuster können allgemeine, aber auch spezifische Informationen getestet. Bereiche von energetischen Schwerpunkten bestimmt, die Reaktionsmöglichkeiten von Muskeln und anderen Organen und Organsystemen aufgezeigt oder allergi-
